

NF-GRC-002 — Company Profile

Purpose

This document establishes the organizational profile and business context of NovaForge Manufacturing, Inc. It serves as the authoritative reference for organizational structure, operations, technology, information assets, business relationships, and compliance considerations used throughout the NovaForge Governance, Risk, and Compliance Program.

1. Company Overview

Company Name: NovaForge Manufacturing, Inc.

Industry: Industrial Robotics & Advanced Manufacturing

Headquarters: Everett, Washington

Founded: 2019

Employees: Approximately 185

Operating Region: United States and Canada

Business Model: Business-to-business design, manufacture, integration, and support of industrial robotic automation systems.

Company Description

NovaForge Manufacturing, Inc. is a privately held industrial robotics and advanced manufacturing company headquartered in Everett, Washington. The company designs, manufactures, integrates, and supports robotic automation systems for commercial and industrial customers throughout North America.

NovaForge combines mechanical engineering, robotics, software, cloud-connected services, and manufacturing operations to deliver automation solutions used in production and material-handling environments. Its operations depend on intellectual property, engineering systems, cloud services, corporate IT infrastructure, manufacturing technology, third-party suppliers, and customer information.

Rapid business growth and increased reliance on interconnected technology have expanded NovaForge's cybersecurity, operational, regulatory, and third-party risk exposure. The organization is therefore establishing a formal Governance, Risk, and Compliance program to provide structured oversight of information security and organizational risk.

2. Mission & Business Objectives

Mission

To design reliable, intelligent, and secure robotic automation systems that improve the safety, efficiency, and productivity of modern manufacturing.

Primary Business Objectives

- Expand the company's North American customer base.
- Protect proprietary robotics designs and intellectual property.
- Maintain reliable manufacturing and customer support operations.
- Increase adoption of cloud-connected robotics services.
- Maintain customer trust and contractual compliance.
- Manage cybersecurity and operational risks as the company scales.
- Build security and compliance capabilities that support future enterprise customers.

3. Products & Services

ForgeArm Series — Industrial robotic arms used for assembly, material handling, machine tending, and repetitive manufacturing tasks.

ForgeVision Platform — Computer-vision and analytics platform used to monitor robotic operations, equipment status, and production performance.

NovaCare Services — Installation, integration, maintenance, remote diagnostics, software updates, and technical support for NovaForge customers.

4. Organizational Structure

Department	Primary Function
Executive Leadership	Strategy, governance, organizational oversight
Information Technology	Infrastructure, endpoints, identity, business systems
Information Security & GRC	Security governance, risk, compliance, incident coordination
Engineering & R&D	Robotics design, software, firmware, intellectual property
Manufacturing Operations	Production, assembly, testing, industrial systems
Sales & Customer Success	Sales, customer relationships, account management
Field Services	Installation, maintenance, diagnostics, customer support
Finance	Accounting, purchasing, financial reporting
Human Resources	Workforce administration and employee records
Legal & Compliance	Contracts, legal obligations, regulatory guidance
Supply Chain & Procurement	Suppliers, components, purchasing, vendor relationships

5. Locations & Operating Environment

Everett, Washington — Headquarters & Manufacturing

Approximately **140 employees**

Contains:

- Corporate offices
- Engineering/R&D
- Manufacturing floor
- IT infrastructure
- Executive leadership
- Warehouse
- Robotics testing
- Finance/HR

Austin, Texas — Engineering & Customer Support

Approximately **30 employees**

Contains:

- Software engineering
- Customer support
- Field services
- Sales

Remote Workforce

Approximately **15 employees** distributed throughout the United States.

Primarily:

- Sales
- Field engineers
- Customer success
- Administrative roles

Total:

~185 employees

6. Technology Environment

Cloud & SaaS

Microsoft 365
Microsoft Entra ID
AWS
GitHub
Jira
Confluence
Salesforce

Corporate IT

Windows endpoints
Linux servers
Corporate Wi-Fi
VPN / remote access
Network firewalls
Endpoint protection
Centralized identity management

Engineering

CAD systems
Source-code repositories
Development environments
Robotics simulation tools
Firmware development systems

Manufacturing / OT

Industrial robots
PLCs
Engineering workstations
Manufacturing equipment
Industrial network segments
Testing systems

7. Information & Data Environment

NovaForge handles:

Customer Information

Contact information, contracts, support cases, system configurations.

Employee Information

Personnel records, payroll information, contact information, benefits information.

Financial Information

Invoices, banking information, purchasing records, budgets.

Intellectual Property

CAD designs, robotics specifications, source code, firmware, engineering documentation.

Authentication Data

User accounts, credentials, authentication tokens, access permissions.

Operational Data

Manufacturing data, equipment telemetry, maintenance records, production information.

8. Customers & Business Relationships

NovaForge primarily serves:

Manufacturers

Warehouses and distribution centers

Automotive suppliers

Industrial equipment companies

Technology manufacturers

Contracts may require NovaForge to demonstrate appropriate cybersecurity controls, incident-response capabilities, data protection, access controls, and vendor oversight.

9. Third-Party Environment

NovaForge depends on third parties for:

- Cloud infrastructure
- SaaS applications
- Component suppliers
- Logistics providers
- Payroll and HR services
- Payment/financial services
- Managed technology services
- Software development tools
- Customer support platforms

10. Regulatory & Compliance Environment

NIST CSF 2.0 — Primary cybersecurity governance framework adopted voluntarily by NovaForge.

SOC 2 Trust Services Criteria — Used as a reference for evaluating controls and supporting customer assurance/readiness activities.

Applicable privacy laws — Requirements evaluated based on the personal information NovaForge collects and the jurisdictions in which it operates.

Contractual security requirements — Security obligations established through customer, supplier, and service-provider agreements.

Industry and safety requirements — Applicable requirements associated with manufacturing operations and industrial robotics.

11. Critical Business Functions

Business Function	Criticality
Manufacturing Operations	Critical
Engineering & Product Development	Critical
Identity & Access Management	Critical
Cloud Infrastructure	High
Customer Support	High
Supply Chain & Procurement	High
Corporate IT	High
Sales Operations	Moderate
Finance	High
Human Resources	Moderate

12. Cybersecurity & GRC Context

NovaForge's continued growth, adoption of cloud services, reliance on intellectual property, integration of corporate IT and manufacturing technologies, dependence on third-party vendors, and increasing customer security expectations have increased the organization's cybersecurity risk exposure.

NovaForge is establishing a formal GRC program to provide consistent governance, identify and manage organizational risk, establish security policies and controls, evaluate third-party risk, improve incident preparedness, support customer and contractual requirements, and provide executive leadership with visibility into cybersecurity posture.

NIST Cybersecurity Framework 2.0 will serve as the primary cybersecurity governance framework, supplemented by additional control and assurance frameworks where appropriate.
